(832) 620-9310 | GabrielArquizaCruz@gmail.com | linkedin.com/in/gabriel-arquiza-cruz | github.com/gabrielzurc10 | gabriel-cruz.dev

PROFESSIONAL SUMMARY

Software Engineer with 4+ years building cloud-native applications and distributed systems across HR/payroll, telecommunications, and higher education. Builds full-stack with Java, Spring Boot, PHP, and React on AWS, delivering enterprise software for 36,000+ organizations and automating workflows that cut processing times up to 80%, saving thousands of hours annually.

TECHNICAL SKILLS

Languages – Java, JavaScript, TypeScript, PHP, Python, C#, C++, SQL, HTML, CSS.

Frameworks and Libraries – Spring Boot, React, Angular, Node.js, Next.js, OpenAI API, FastAPI, Tailwind.

Database and Caching – MySQL, PostgreSQL, DynamoDB, MongoDB, Firestore, Redis, Couchbase, NoSQL.

Deployment and Cloud Platforms – Docker, Kubernetes, AWS, GCP, Git, GitHub Actions, GitLab CI/CD, npm, Terraform, Gradle.

PROFESSIONAL EXPERIENCE

Software Developer II → IV — Paycom

Grapevine, Texas | January 2023 – May 2026

- Led 5+ test-driven automation features for an onboarding platform serving 36,000+ organizations, automating cross-module data flow to cut HR processing time by 80% while mentoring junior developers through code reviews and pair programming.
- Architected an onboarding email module with a React dashboard and Control-M queue-worker delivering 100,000+ emails monthly, and built containerized PHP microservices on Docker orchestrated by Kubernetes that cut coordination time by 60%.
- Built international onboarding workflows across five countries on a PHP/JavaScript MVC architecture, tuning MySQL and Couchbase to cut manual setup by 80%, improve read times by 40%, and save HR teams 1,000+ hours annually.

Application Developer — University of Houston, Enterprise Systems

Houston, Texas | October 2021 – December 2022

- Delivered full stack solutions for campus web applications used daily by 47,000+ students and 3,000+ faculty, developing backend services in Java and user interfaces with JavaScript.
- Modernized the UI/UX of the course marketplace and student information dashboard, leveraging JavaScript on the frontend and Java on the backend to improve navigation, accessibility, and visual consistency.
- Integrated PeopleSoft campus solution software with custom-built tools and tuned PostgreSQL schemas, improving query performance on high-volume endpoints.

Software Engineer Intern — T-Mobile

Frisco, Texas | May 2022 – August 2022

- Developed full stack customer location visualization for support agents, with Spring Boot REST APIs in Java and Angular dashboard components, reducing average call-handle time by 60% and accelerating issue resolution.
- Authored and published an internal Node.js npm package that standardized API authorization across T-Mobile services, eliminating repeated auth boilerplate for 10+ engineering teams.
- Delivered features through Agile sprints using Jira for planning and tracking, presenting sprint demos to development teams and stakeholders to gather feedback and align on priorities each iteration.

PROJECTS

rabbitrole — AI Resume Reviewer & Job Matcher

rabbitrole.com

- Created an AI resume reviewer and job matcher that gives job seekers specific feedback and roles they actually fit. Users upload a resume, and the AI returns severity grouped feedback with suggested fixes, then finds matches with live job postings.
- Developed with a React, Next.js, TypeScript, and Tailwind frontend on S3 and CloudFront, and a Spring Boot backend running on AWS Lambda with DynamoDB and Cognito auth, powered by OpenAI models and RAG grounded in live job postings.
- Automated infrastructure and deployments with Terraform and GitHub Actions, shipping a serverless stack that runs at one to two dollars per month and showcases end to end ownership across frontend, backend, AI, and DevOps.

Gabriel Cruz — Personal Website with AI Assistant

gabriel-cruz.dev

- Built a personal website featuring an AI assistant that answers questions about my background and experience, using a Next.js, React, and TypeScript frontend statically served through Amazon S3 and CloudFront.
- Engineered the AI assistant to stream LLM responses over Server Sent Events with a Python FastAPI backend, maintaining conversation memory per session and a system prompt hardened against prompt injection.
- Provisioned the full AWS stack as code with Terraform, including Lambda, API Gateway, S3, CloudFront, and Route 53, and automated deployments through GitHub Actions, achieving \$0 compute cost at idle and scaling automatically under load.

EDUCATION

Bachelor of Science in Computer Science — University of Houston

Houston, Texas | August 2020 – December 2022
