

GABRIEL CRUZ

Dallas, TX | (832) 620-9310 | GabrielArquizaCruz@gmail.com | linkedin.com/in/gabriel-arquiza-cruz | github.com/gabrielzurc10 | gabriel-cruz.dev

PROFESSIONAL SUMMARY

Software Engineer with over 4 years of experience designing, developing, and deploying scalable full-stack applications. Skilled in Java, Spring Boot, Python, PHP, C#, .NET, JavaScript, TypeScript, React, Angular, and Node.js, with strong knowledge of REST APIs, microservices, containerization, SQL and NoSQL databases, and cloud platforms including AWS, Azure, and GCP. Writes maintainable code and builds scalable systems by applying SOLID principles, unit testing, and CI/CD, owning projects from requirements through deployment.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, PHP, C#, C++, Bash, SQL, GraphQL, HTML, CSS.

Frameworks & Libraries: Spring Boot, .NET, React, Redux, Express, Angular, Node.js, Next.js, FastAPI, Tailwind, Pandas, LangChain.

Databases & Caching: MySQL, MSSQL, PostgreSQL, DynamoDB, MongoDB, Redis, Couchbase.

Cloud & DevOps: AWS, GCP, Microsoft Azure, Lambda, S3, CloudFront, CloudWatch, API Gateway, Cognito, Docker, Kubernetes, Kafka, RabbitMQ, Terraform, GitLab CI/CD, GitHub Actions, Git, Gradle, Maven, npm, Webpack.

Practices: Agile, RESTful API Design, Microservices, Artificial Intelligence, Retrieval-Augmented Generation, Event-Driven Architecture, CI/CD, Test-Driven Development, Distributed Systems, Cloud Platform Architecture, Cross-Functional Collaboration, System Design.

PROFESSIONAL EXPERIENCE

Software Engineer IV | Paycom

Grapevine, TX | January 2023 – May 2026

- Led development of 5 automation initiatives using PHP, C#, .NET, and Couchbase caching across event-driven microservices, workflow engines, and REST API integrations, partnering with HR teams to eliminate an estimated 1,000 hours of manual work per year.
- Designed and built a notification scheduling system using PHP, C#, .NET, TypeScript, React, Kafka, and RabbitMQ, automating onboarding communications and reducing email coordination time by 80%.
- Developed a configurable form-templating system using containerized microservices with Docker, Kubernetes orchestration, and a React/TypeScript dashboard, standardizing onboarding across 5 countries and reducing setup time by 60%.
- Implemented GitLab CI/CD pipelines to automate unit testing, lint checks, and deployment, cutting release time from 2 hours to 20 minutes.

Software Engineer | University of Houston, Enterprise Systems

Houston, TX | October 2021 – December 2022

- Delivered full-stack web applications using Java and JavaScript, scaled to be used daily by more than 47,000 students and faculty, reducing manual effort by 55%.
- Enhanced the student information dashboard and course marketplace by refactoring Java REST APIs, reducing page load times by 70%.
- Optimized database schemas using PostgreSQL by rewriting joins, adding indexes, and introducing caching with Redis, reducing query times by 50%.

Software Engineer Intern | T-Mobile

Frisco, TX | May 2022 – August 2022

- Accelerated customer support by releasing a customer location indicator component on T-Mobile's 5G coverage map using Spring Boot and Angular, speeding coverage diagnosis and reducing average call-handle time by 30%.
- Published an internal Node.js library in npm that standardized proof-of-possession token authorization across T-Mobile services using JavaScript and Postman, driving adoption across 5 engineering teams and saving an estimated 200 hours of boilerplate setup.

PROJECTS

rabbitrole – AI Resume Reviewer and Job Matcher

rabbitrole.com

- Built an AI resume reviewer and job matcher using Java, Spring Boot, Gradle, TypeScript, React, Next.js, LLMs, and RAG pipelines, critiquing resumes and ranking live job postings.
- Secured user logins using Amazon Cognito and Google OAuth, including token refresh and session handling.
- Deployed a Spring Boot backend on AWS Lambda with DynamoDB using Terraform, achieving automated deployment with CI/CD and a serverless architecture that scales on demand.

Personal Website with AI Assistant

gabriel-cruz.dev

- Released a personal website with an AI assistant using Python, FastAPI, TypeScript, React, Next.js, and LLMs to answer professional background questions.
- Architected the frontend to be statically served from S3 and CloudFront utilizing CDN and caching, resulting in fast global page loads.
- Provisioned the AWS architecture as code with Terraform and CI/CD with GitHub Actions, automating builds and deployments.
